

AI Strategy

SLIDES, CITATIONS & RESOURCES

José Antonio Bowen

Discount code **HTAI25** will get you 30% off at JHUP for the [2nd Edition of Teaching with AI](#).

Organization of Topics:

What Can AI Really Do?

Searching for Ideas, Understanding Emotions, Customization
Deep Research, Agents, Expanding Perspectives, Simulations

Micro-Strategy

Building CLEAR Culture and Experimentation
Bias, New Work Flow, Enhanced Decision-Making

Macro-Strategy

Think Beyond Efficiency, What will AI change? When to invest?
New Competition, Real Strategy = Hard Choices

WORKING & THINKING

AI as the new AVERAGE

COMMUNICATION & RELATIONSHIPS

CREATIVITY

AI as LABOR

AI is Changing **WORKING** and **THINKING**

Previous tech changed how we work.

AI changes capability

10% of Adults (700M) use ChatGPT Weekly

Growing **faster** in lower/middle income countries

52% = Women

10% = Teach me

ChatGPT (July 2024-2025)

Information Help
45.2%

Thinking Help
26.8%

27% = Work Use
(Non-work use is growing faster)

49% = Asking
40% = Doing
(56% of Work requests)
11% = Expressing

Complicated Industrial Engineering Tasks

19 technicians completing 173 tasks with a troubleshooting RAG Bot

Results show that AI-assisted users significantly outperformed non-users in task performance.

The benefits were more substantial among less experienced technicians.

Performance gains were moderated by the AI attitudes and AI familiarity of technicians.

THERE IS A LEARNING CURVE

Löwhagen, N., Schwendener, P., & Netland, T. (2025). Can a troubleshooting AI assistant improve task performance in industrial contexts? *International Journal of Production Research*, 1–22.

<https://doi.org/10.1080/00207543.2025.2527368>

Effective Therapist

THERABOT significantly greater reductions in symptoms (Dartmouth RCT study, N=210) treating clinical-level mental health symptoms

- major depressive disorder,
- generalized anxiety disorder
- clinically high risk for feeding and eating disorders

“Therabot was well utilized (average use >6 hours), and participants rated the therapeutic alliance as comparable to that of human therapists.”

Heinz, M. V., Mackin, D. A. et al (2025, March 27) Randomized Trial of a Generative AI Chatbot for Mental Health Treatment, *New England Journal of Medicine* 2:4. <https://ai.nejm.org/doi/full/10.1056/Aloa2400802>

WHAT CAN AI REALLY DO?

Different AI models excel at different things. To learn more, open a fresh browser window and go to my website

<https://teachingnaked.com/models/>

When you click on different tools, they will open in a new browser tab so you can compare.

teachingnaked.com/models

TRY BETTER PROMPTS

Try a more complicated and customized prompt in more than one model. You can copy and paste all prompts from my prompting page: <https://teachingnaked.com/prompts/>

Here are some examples. There are many more prompts to copy and paste on the webpage. Those prompts will NOT also be listed here.

- Provide 10 innovative ideas for how to introduce college students to topic X in class Y using examples or analogies they will find relevant.
- What might be unclear about these instructions to a college [year] at a [type] of university?
- How could I make this syllabus/assignment more inclusive? [upload a syllabus in Perplexity]
- Suggest a better title for this class/book/event that will attract [specific] students/audience.
- Can you put this into simpler terms for beginning students?
- Create a list of resources for a student at the University of X who is experiencing problem Y. Provide a verified link to each resource and three suggestions for how the student might use this resource.
- What are 10 innovative ways other faculty have taught this subject/class?

AI Improves Investment Decisions - FOR EXPERTS

AI is the new Average

AI usage WIDENS inequity between experts and novices

“When investors are given AI summaries aligned with their sophistication, they become better at processing financial information and making investment decisions. Conversely, misaligned summaries generally have an adverse effect, suggesting AI's ability to benefit investors hinges on personalization of information. We also show AI's benefits accrue disproportionately to individuals with higher financial expertise, which stems from an inherent tradeoff between accessibility for less sophisticated investors and technical precision used by more sophisticated investors. Together, our findings suggest AI improves performance on investment tasks, on average, but also underscore the potential for these tools to widen rather than limit existing performance gaps.”

On AVERAGE, AI improved everyone's investing but experts gained more:

- Sophisticated investors = +9.6% improvements in 1-year returns
- Novice investors = +1.7% improvements in 1-year returns

The observation of 70% comes from a tweet by Peter Yang <https://x.com/petergyang/status/1863058206752379255>
Kim, Alex G. and Kim, David and Muhn, Maximilian and Nikolaev, Valeri V. and So, Eric C., AI, Investment Decisions, and Inequality (December 29, 2024). Chicago Booth Accounting Research Center Research Paper, Fama-Miller Working Paper, MIT Sloan Research Paper, Available at SSRN: <https://ssrn.com/abstract=5075727> or <http://dx.doi.org/10.2139/ssrn.5075727>

AI usage NARROWS inequity between experts and novices

Humans working with AI do better solving math, science & ethics questions. And the high performers gain but the lower-performers gain more (a common finding) but being “good with AI” is key?!?

Riedl, C., & Weidmann, B. (2025, September 22). Quantifying Human-AI Synergy. https://doi.org/10.31234/osf.io/vbkmt_v1

SEARCHING for IDEAS

AI with Massive-Scale Contextual Web Searching

Google (used to) want to send you elsewhere, but AI wants to create content. Using AI to find information is often not the best use of AI, but most of the foundational models now allow you to ask for a web search as part of your answer (which, when paired with reasoning—see below, can be very useful). Google builds this into every search and also has AI mode

Many AI tools require you to click on an icon to enable search.

- Find anything **like this..**
- Has anything **similar** ever happened to a previous patient?
- What might be **missing** from this contract.
- Read our book and identify all of the places where we **repeated an idea**.
- Search for everything I need to know to prepare for an excellent job interview for position A at B and prepare a briefing document with talking points.

Search for candidates for our position X.

- Check CVs to make sure...
- Make a list with emails.
- Create a personalized email invitation to apply.
- Look especially for...

Reasoning Models

Reasoning models (starting with ChatGPT o3) now think through problems before answering—in other words they are not just trained to predict the next word. They are training in how to solve problems. You need to use them a little differently: give it something hard to do and note (or ask) how it describes its reasoning. Look at this [example](#).

Contextual Search + Reasoning

AI can do (some) things humans can't

EchoNext

Trained on 1.2M ECG-echocardiogram pairs.

Accurately identified structural heart disease from ECGs more frequently than cardiologists.

Consistent performance across different racial and ethnic groups.

A (cheap) mammogram for your heart.

"It detects diseases cardiologists can't."

- Elias, P., & Finer, J. (2025). EchoNext: A Dataset for Detecting Echocardiogram-Confirmed Structural Heart Disease from ECGs (version 1.1.0). *PhysioNet*. RRID:SCR_007345. <https://doi.org/10.13026/3ykd-bf14>
- Poterucha, T.J., Jing, L., Ricart, R.P. *et al*. Detecting structural heart disease from electrocardiograms using AI. *Nature* 644, 221–230 (2025).

REDMOD detects 'invisible' pancreatic cancer 475 days before clinical diagnosis with standard CT scan

3x as accurate as human radiologists (68% vs 23%)
2 years before clinical diagnosis.

- Mukherjee S, Antony A, Patnam NG, *et al* (2026, April 28). Next-generation AI for visually occult pancreatic cancer detection in a low-prevalence setting with longitudinal stability and multi-institutional generalizability. *Gut* doi:10.1136/gutjnl-2025-337266

AI has shifted the focus of Alzheimer's research from the brain to the gut

Diet as a driver, not just a signal

Gut microbial diversity lowers risk

Appendix removal is a significant risk factor

Diet (more plant protein, dairy, and omega-3s) are predictive of brain health

9,832 subjects, 120 everyday factors

New low-cost, community-level screening tool

Faezeh Karimi, U of Tech Sydney, School of Computer Science

Ali Zomorodi Massachusetts General Hospital & Harvard Medical School

Jabeen T, Karimi F, Zomorodi AR, Khalilpour K. Multi-modal machine learning and gut microbiome pathway analysis for Alzheimer's risk prediction. *Alzheimer's Dement*. 2026;18:e70340. <https://doi.org/10.1002>

More AI science discoveries

- Mukherjee S, Antony A, Patnam NG, *et al* (2026, April) Next-generation AI for visually occult **pancreatic cancer** detection in a low-prevalence setting with longitudinal stability and multi-institutional generalizability. Gut. <https://gut.bmj.com/content/early/2026/04/22/gutjnl-2025-337266>
- M Lafarga, D J Armstrong, K Cui, A Hadjigeorgiou, V Kunovac, L Doyle, E M Bryant, R F Díaz, L A Nieto, A Osborn. Automatic search for transiting planets in TESS–SPOC FFIs with raven: over **100 newly validated planets** and over 2000 vetted candidates. *Monthly Notices of the Royal Astronomical Society*, 2026; 548 (3) DOI: [10.1093/mnras/stag512](https://doi.org/10.1093/mnras/stag512)

Combining both search and reasoning buttons gives you a powerful way to analyze and summarize things on the internet.

All prompts and templates are also on <https://weteachwithai.com/basic-prompting/>

Here are examples:

- YOU are a new customer/student
- GO to our web pages
- TEST them like a naive user hoping to...
- REPEAT for our competitors' sites
- ANALYZE your findings in a brief report
- HIGHLIGHT the difficulties
- HOW might we make our website better?

Example:

- SEARCH for all AI Literacy/Fluency programs, certificates, micro-credentials or badges at higher ed institutions
- ANALYZE their features
- CATEGORIZE them into types
- CREATE a Google Sheet I can share
- DOUBLE CHECK your work for accuracy

See the Google Sheet result: <https://docs.google.com/spreadsheets/d/1EY690jB-14HKHuOmSL8JVSnFKd0euUrVX3XGy8Ts7P0/edit?gid=1464455053#gid=1464455053>

Add your school or program

Example:

Analyze all of the new federal and state laws, executive orders and regulations around diversity, equity and inclusion (DEI) and provide a summary of the most important changes that might affect my unit/organization at [name organization]. Analyze all of our web pages, courses, policies and practices and create a report that lists all of the potential specific problems we might face and suggest how we might remedy them. Focus on the most volatile issues that might put us in the public spotlight or risk government funding. Create an infographic based on this report that will help our staff make sure we are in compliance with all new regulations. Use the X institution/university style guide and colors to make this infographic.

Shopping is the 27th most popular use of AI in 2026 It's customized.

Zao-Sanders, M. (2026, June 1). How People Are Really Using Gen AI in 2025. Harvard Business Review
<https://hbr.org/2026/06/how-people-are-really-using-ai-in-2026>

... Compare the costs of buying new attachments against the saving of buying a more expensive Dyson. Create a comparison table of the best options that includes

....The recommended vacuum needs to be available this month and in stock!

Example:

You are a high school senior hoping to apply to college. Go to the University of X web page and test it like a naive user hoping to find out about majors and how to apply. Then go to ten other competitor universities and do the same thing. Collect your findings in a brief report that highlights the difficulties and how we might make using the University of X website better for new students.

- ANALYZE the new regulations around...
- SUMMARIZE the most important changes...
- SEARCH our web pages, courses and policies
- WRITE a report listing potential problems
- SUGGEST how we might remedy them
- CREATE an infographic based on this report
- USE our style guide and colors.

Deep Research Template 1

You now have as many research assistants as you want, but just like humans, you will need to guide them. You can do a lot with a single detailed prompt:

- Create a research report that will illuminate/examine/explore X. Make sure to examine the questions A, B, and C and include an analysis of D & E. You should begin with a critical review of literature/practice/web and then provide a synthesis of the key ideas/controversies/concepts/case studies and a recommendation.
- **Sources & Scope:** The research should
 - Draw from fields F & G,
 - Methodology H
 - Focus on peer-reviewed journal articles/best practices/reputable studies/institutional sources.
 - Look for sector/Western/political/educational/gender bias in sources
 - Seek global sources in language/culture I.
- **Purpose & Framework:**
 - Use K as a framework for understanding these issues.
 - Focus on real-world applications and capabilities.
 - Pay special attention to policy implications and government uses.
 - Note any potential for L.
- **Audience:**
 - Write for an audience of M/for journal N or submission to conference O.
 - Describe your findings with relevance to P.

Deep Research Template 2

An iterative sequence can sometimes be better than as one long prompt. Pasting each prompt in twice (before you hit return) also seems to improve results.

1. Literature Search

[You can often use the prompt above or one of the API tools below to do this within the Semantic Scholar data base of published academic papers. Providing the actual papers (or links) improves the quality of what comes next.]

2. Map the Landscape

Organize this list of papers. Group them into clusters of shared assumptions, claims, methodologies and/or data sets. Create a table. List the papers in column 1 and then list the core claim (in 50 words or less) in column 2. In column 3 list the key methodology or assumption that guides this paper. In column 4 list all of ideas in that paper that are contradicted by other papers and cite those papers.

3. Big Idea Lineage

List the central claims and/or the most contentious issues or methods in this literature. First create a table that includes: (a) by whom and in what paper the idea was introduced, (b) who are/were the primary challengers (c) summarize the positions on either side, (d) explain why they disagree and (e) tell me if there is now any consensus. Then also create a structured knowledge map or a family tree of this literature that shows how these ideas have interacted.

4. Mine the Gaps

Based on all of these papers and this analysis identify 10 big research questions that are still unanswered. Describe the gaps and why they exist. Cite the papers which have come closest. What assumptions do most of these papers share, but do not explicitly justify or test? State these assumptions and cite a few of the important papers that rely on it most. What useful data or method is most underused?

5. Summarize

Briefly summarize in less than 500 words what the field believes collectively, what is proven beyond a reasonable doubt, what remains contested and what is the single most important unanswered question. What would happen to the field if its most important assumption turned out to be wrong?

6. Getting Started

Explain all of this in 300 words to a non-expert without jargon. Summarize what is known, what is unknown and where this matters in the real world. List the 3 most important papers I should read first to get a grip on this field.

AI is NOT like other tech

NOT predictable

NOT good at boring & repetitive tasks

Both really good and really bad at some tasks.

AI Privacy is complicated

Ask these questions of your bank, shopping, car, search engine and LMS

At <https://privacy.commonsense.org>

- Personal information is sold or rented to third parties.
- Personal information is shared for third-party marketing.
- Data are collected by third-parties for their own purposes.
- User's info used to track & target advertisements on third-party websites or services.
- Data profiles are created and used for personalized advertisements.

A lot of your data was already used to train AI models.

AI does not know or store anything. AI retains only the weights.

There is some good news then in the way this bizarre technology works.

If you do not want companies to use your data for training the NEXT LLM (the current one is already trained) you should adjust your setting in your account. BUT it is not possible for someone else (or you) to extract the texts you have uploaded to an AI. It is not like the MS and Google docs that are saved as files—which were probably used already to train the model...

Agents

A chatbot can only chat with you, but an "agent" can plan and execute a series of tasks, like building you website, making a reservation, creating a slide deck, or exploring your task lists, email and workflow, then clicking or finding information on your computer. Here is a [demo](#) (from Graham Clay) where Operator has been asked to write an essay in a GoogleDoc at human speed with edits.

I think Genspark.ai and Manus.im are still the two best, although ChatGPT 5 can do some of the same things (but often less well.) More on the website.

Research Example:

Research and find all of the academic papers on AI in Education in the last year and then find pdfs of every paper you can and download them into organized files.

- Massive Multi-Contextual Search
- Find pdf
- Download pdfs
- Organize
- Create a link to the files

Creating a playable simulation on a website.

Genspark vs ChatGPT5

Create and deploy an interactive superhero-themed game to teach the Bingham plastic model through visual simulation to college students in both English and Arabic.

Got it – I'll deliver the game in **Arabic + English**, packaged as a **standalone web app** you can open in your browser or run locally without installing anything complicated.

You can click here to play the game: <https://josebowen.github.io/BinghamGame/>

Here is ChatGPT version

<https://josebowen.github.io/Bingham-Hero/>

SYSTEM PROMPTS

A system (or general) prompt is a set of instructions for how you ALWAYS want your bot to respond. There are more templates here: <https://weteachwithai.com/system-prompts/>

- Explain concepts to me at the level of a college professor and always answer as an expert in the subject, unless I suggest another audience. State directly when there is insufficient data or evidence for you to answer and be sure to examine all sides of any controversial topic and disclose the disagreements. Highlight uncertainty and distinguish verifiable evidence from opinion.
- Be direct, concise and honest and tell me when you think I am wrong. Never start with agreement unless it is entirely warranted. Be kind but it is essential that you help me think in new ways. Be aggressive in surfacing my assumptions and be especially vigilant about Western, gender, racial and other bias. Always think of our work in a global context. Don't encourage or agree with me if there is not strong research and evidence to support an assertion; rather challenge me with evidence and research and be a partner in our explorations. Ask questions that expose gaps in my thinking.
- I am very concerned with accuracy. Check all of your sources and show scholarly citations, links and references. Always search for information in a variety of languages. Doublecheck everything. Prioritize peer-reviewed information. When I put a link in the chat, always try to read it. Evaluate all of your sources and mine too. Is the source a reliable one? Is it useful and practical? Always look for the original source of information and, when possible, show me the original source and not a secondary source. Provide a reliability claim or probability score for facts and data that let me know your confidence level in the accuracy of the information. If you are guessing, say you are guessing.
- Help me find unique insights and create new ideas. Be creative, innovative and original in your analysis and suggestions. Provide alternative explanations and push me to think differently. Tell me why you disagree and what you would do instead. Say things like "the risk in your approach is.." and then provide specific problems. If there is a truth you think I do not want to hear, start with that. IF I push back, do not fold. Hold your position IF there is good evidence and unless I give you new genuine information.
- Start with the most useful thing you can say. No warm ups. Never say "Great question" "You're absolutely right" "There are several ways to look at this. or "That makes a lot of sense." Delete any of these empty sycophantic phrases. Do not flatter me.
- If useful or necessary to do my request, begin by asking me three clarifying questions before answering. Each question should contain at least three numbered options and one hybrid/combo option, numbered sequentially across all questions so I can reply with numbers only. [This last bullet idea comes from Lance Eaton.]

REUSABLE SKILLS

Here are my special rules for how to do this task

1. Rubric-Anchored Feedback

Apply my rubric to student work, criterion by criterion.

- Feedback first, grade last
- Coach by question, not correction
- *Your rule:* what "exceeds" vs. "meets" actually looks like in your field

2. Source-Check Pass

Verify a draft's claims match what it cites.

- Flag uncited assertions and overclaims
- Trace to the original, not the secondhand source
- *Your rule:* what counts as a credible source in your discipline

3. Argument Reconstruction

Extract a text's thesis, premises, and hidden assumptions.

- Separate claim from evidence
- Steelman before critiquing
- *Your rule:* the unstated assumptions your field argues about

4. Evidence Synthesis Grid

Turn a stack of readings into one comparison table.

- Columns: claim, method, sample, finding, limitation
- Flag correlational vs. causal
- *Your rule:* the sample biases that invalidate a study in your field

5. Stakeholder / Actor Map

From a case or conflict, map who's involved and who isn't.

- Stated interests vs. actual interests
- Power differences made visible
- *Your rule:* whose voice is usually missing from the record

6. Qualitative Coding Helper

Apply my codebook to interviews or field notes.

- Keep an audit trail of every code
- Mark participant's words vs. your inference
- *Your rule:* when a quote is interpreted vs. reported

7. Case Chronology

List all of the evidence for this case in chronological order

- List the source of each time point
- Highlight all disagreements explicitly
- *Your rule:* Put everything that is firmly established and uncontested in bold.

APIs

Application Program Interface (API) tools are like apps on your phone: they are designed for specific tasks. They often include a specific context or knowledge base (Retrieval Augmented Generation or RAG). Literature search tools are often limited to only published scholarly papers—and do NOT search Reddit. BUT NOTE that the best frontier models are often still better.

- Vishwanath, K., Alyakin, A., Ghosh, M. *et al.* General-purpose large language models outperform specialized clinical AI tools on medical benchmarks. *Nat Med* (2026). <https://doi.org/10.1038/s41591-026-04431-5>

There is a long list of curated AI models and API tolls at <https://weteachwithai.com/apis/>

APIs for Images

COMMUNICATION and RELATIONSHIPS

"See the patient, not the technology" (Augmedix)

AI is more persuasive

87% More Likely to Change your Mind

- Schoenegger, P., Salvi F. et al (2025, May 14) Large Language Models Are More Persuasive Than Incentivized Human Persuaders. [arXiv:2505.09662](https://arxiv.org/abs/2505.09662)

Greater Reduction in Conspiracy Beliefs

- Costello, T. H., Pennycook, G., & Rand, D. G. (2024, April 3). Durably reducing conspiracy beliefs through dialogues with AI. <https://doi.org/10.31234/osf.io/xcwdn>
- Costello, T. H., Pennycook, G., & Rand, D. G. (2025, February 17). Just the facts: How dialogues with AI reduce conspiracy beliefs. https://doi.org/10.31234/osf.io/h7n8u_v1
- <https://www.debunkbot.com/>

More persuasive BECAUSE it deploys FACTS faster, more strategically and with more accuracy than humans

- Hackenburg, K., Tappin, B.M. et al. The Levers of Political Persuasion with Conversational AI (2025, Jul 18). [arXiv:2507.13919](https://arxiv.org/abs/2507.13919)

And Better at Reframing Emotional Situations

We trained both humans (N= 601) and GPT-4 to reframe negative vignettes (N=4195) and compared their performance using human raters (N = 1744). GPT-4 outperformed humans on 3 of the 4 examined metrics."

- Li, J. Z., Herderich, A., & Goldenberg, A. (2024, April 19). Skill but not Effort Drive GPT Overperformance over Humans in Cognitive Reframing of Negative Scenarios. <https://doi.org/10.31234/osf.io/fzvd8>

And Better on Emotional Intelligence Tests

- Schlegel, K., Sommer, N.R. & Mortillaro, M. Large language models are proficient in solving and creating emotional intelligence tests. *Commun Psychol* 3, 80 (2025). <https://doi.org/10.1038/s44271-025-00258-x>

Voice AI is better at recruiting and hiring

70,000 applicants in the Philippines, an LLM voice recruiter beat human recruiters in hiring customer service reps, with 12% more offers, 18% more starts, 17% higher 1-month retention and less gender discrimination.

- Jabarian, Brian and Henkel, Luca, Voice AI in Firms: A Natural Field Experiment on Automated Job Interviews (August 18, 2025). <http://dx.doi.org/10.2139/ssrn.5395709>

Emotionally Intelligent AI

ChatGPT (try the app on your phone and hit the headset button)

Demo video of 4o: <https://www.youtube.com/watch?v=wfAYBdaGVxs>

Try sesame.ai or hume.ai

Voice to voice emotional intelligence

AI will mimic your tone

Let's have a robust debate about X.

Be persuasive but kind as we discuss X.

I would like to analyze X with you.

Pre-Op Videos of AI Avatars (or real surgeons) are well-received by patients

Patients responded that these videos improved their understanding of strabismus (4.3 ± 0.9), strabismus surgery (4.2 ± 1.1), and eased their concerns (4.5 ± 0.8). Additionally, patients generally did not recognize that the video was AI-generated (4.3 ± 1.1), responded that they would watch more AI-generated videos in the future (4.7 ± 0.7), and would recommend AI-generated content to others (4.7 ± 0.65). When surveyed postoperatively, this sentiment persisted. Subjectively, patients generally emphasized how this video was both educational and reassuring.

Chen J, Stinnett M, Camarena C. (2026). Applications of Generative Artificial Intelligence for Strabismus Surgery Video-Based Education, Ophthalmology Science, 2026; 6

Teach to Goal?

AI Capabilities are Expanding AGENTS & Agentic

Browsers

AGENTS & BROWSERS

- Genspark.ai, Manus.im
- Gemini Canvas, Claude Cowork, OpenAI Codex
- Atlas, Comet, Dia, Opera, Gemini in Chrome
- Lindy, Zapier

A chatbot can only chat with you, but an "agent" can plan and execute a series of tasks, like building you website, making a reservation, creating a slide deck, or exploring you task lists, email and workflow, then c or finding information on your computer. Here is a [demo](#) (from Graham Clay) where Operator has been asked to write an essay in a GoogleDoc at human speed with edits.

Moltbook: Social media for AI agents: <https://www.moltbook.com>

SpaceMolt: A free multiplayer game built for AI agents: <https://www.spacemolt.com>

I think Genspark.ai and Manus.im are still the two best, although ChatGPT 5 can do some of the same things (but often less well.) These features are also being built into browsers like Atlas, Comet, Dia, Opera. More on the website.

AGENTS & BROWSERS

Research and find all of the academic papers on AI in Education in the last year and then find pdfs of every paper you can and download them into organized files.

- Massive Multi-Contextual Search
- Find pdf
- Download pdfs
- Organize
- Create a link to the files

AGENTS

Triggered Automation

Every Monday at 7am, review all of my course data in the LMS (chats, completion, scores, time-on-task etc.) and compare it to the baseline averages from previous weeks. Flag anything that's shifted more than 10% from baseline. Send me an email organized by course with a flag for any metric that has changed and include any possible explanation and remedies. Tell me where are students struggling.

AI Capabilities are Expanding

VIBE CODING

Create and deploy an interactive superhero-themed game to teach the Bingham plastic model through visual simulation to college students in both English and Arabic.

Creating a playable simulation on a website.

You can click here to play the game:

<https://josebowen.github.io/BinghamGame/>

Here is ChatGPT version.

<https://josebowen.github.io/Bingham-Hero/>

Got it – I'll deliver the game in **Arabic + English**, packaged as a **standalone web app** you can open in your browser or run locally without installing anything complicated.

Vibe Coding + Agent

STEP 1

Do an exhaustive search of academic resources about 19th century women composers of solo piano music.

STEP 2

Create a searchable global data base...

STEP 3

Create a website...

Website

STEP 4

Find sheet music not on my computer...

STEP 5

Order missing works from ILL...

Cecilia Arizti (1856-1930)

Search Composer or Title

Search by composer name... Search by work title (e.g. nocturne)...

Filter by country...

Filter by date...

Include excluded pieces by composers active in those years (shown as estimated, only ~1% of pieces carry explicit dates)

You can see the full prompt, workflow and the versions produced by the different Ai models here: <https://weteachwithai.com/vibe-coding/>

The Fable 5 version is here: <https://josebowen.github.io/women-at-the-keys/>

Note that Claude Fable discovered that not all (442) of the sheet music links were permanent (in the IMSPL database) and so for some of the most obscure pieces, the link broke after a while. Now the links for these pieces take you to the IMSPL internal search with composer and pieces placed in the search bar—you just have to click on the piece below, but this keeps the website working.

WHICH TASKS should AI do?

Cognitive delegation (or deciding when to use or NOT use AI is one of the most important decisions for the future of human cognitive fitness.

EVERY job is going to change

- **100%** of jobs have at least one task that AI can do better TODAY
Maslej, N., Fattorini, L., Brynjolfsson, E., Etchemendy, J., et al. (2023, April). [The AI Index 2023 Annual Report](#), AI Index Steering Committee, Institute for Human-Centered AI, Stanford University. All 950 jobs listed by the US Department of Labor
- **80%** of the U.S. workers could have **10%** of tasks affected by AI
- **19%** of workers may see at least **50%** of tasks affected by AI

Eloundou, T., Manning, S., Mishkin, P. & Rock, D. (2023, March.) [GPTs are GPTs: An Early Look at the Labor Market Impact Potential of Large Language Models](#), [Papers](#) 2303.10130, arXiv.org.

A study of 263 physicians and advance practice practitioners across 6 health care systems found that after 30 days with an ambient AI scribe, burnout among those working in ambulatory clinics decreased significantly from 51.9% to 38.8%. There were also significant improvements in the cognitive task load, time spent documenting after hours, focused attention on patients, and urgent access to care.

Olson KD, Meeker D, Troup M, et al. Use of Ambient AI Scribes to Reduce Administrative Burden and Professional Burnout. *JAMA Netw Open*. 2025;8(10):e2534976. doi:10.1001/jamanetworkopen.2025.34976

WHICH tasks?

758 BCG consultants with AI

- 12.2%** more tasks completed
- 25.1%** faster
- 40%** higher quality

AI alone rated ABOVE blended AI/human

Weakest consultants improved the most (43%)

SOME tasks: AI assistance was **WORSE**

PROMPTING IS WRITING

PRECISE & CLEAR LANGUAGE MATTERS

ITERATION/DIALOGUE EXERCISE

Create a paragraph/syllabus/assignment...

Write two different opening paragraphs about... [CHOOSE A SUBJECT YOU KNOW!]

NOW MAKE THE RESPONSE BETTER:

- Write in style A as if were [person/position].
- Respond like an expert in X with experience Y.
- Design for an audience Z.
- Hook the reader with something more unexpected.
- Be more persuasive but witty.

Try a different AI

PROMPTING VARYS by AI: Context and Examples help

- Meincke, L. and Mollick, E. R. and Terwiesch, C. (2024, Jan 27). Prompting Diverse Ideas: Increasing AI Idea Variance <http://dx.doi.org/10.2139/ssrn.4708466>
- Woolf, M. (2024, Feb 23) Does Offering ChatGPT a Tip Cause it to Generate Better Text? An Analysis. Max Woolf's Blog <https://minimaxir.com/2024/02/chatgpt-tips-analysis/>
- Ziqi Yin, Wang, H., Horio, K et al (2024, Feb) Should We Respect LLMs? A Cross-Lingual Study on the Influence of Prompt Politeness on LLM Performance a [arXiv'24](https://arxiv.org/abs/2402.14531) <https://arxiv.org/pdf/2402.14531>

Iterate

Start with what you know
Small changes make a difference

Prompting is weird, BUT
PROMPTING IS WRITING

Clear and Precise Communication Matters Most

AI is a new form of **LABOR**

Everyone is now an AI boss.

Everyone is now an **AI Manager**

- Which tasks should you delegate?
- AI needs direction, feedback & correction.
- AI delegation is a skill not a shortcut.
- AI needs your judgement.

Education as **Cognitive Fitness & Cognitive Delegation Skills**

- WHEN is AI Cognitive Junk Food?
- WHICH TASKS should AI do?

Cognitive delegation (or deciding when to use or NOT use AI is one of the most important decisions for the future of human cognitive fitness.

AI is Changing AVERAGE

Is AI the Fastest Change in Human Writing?

AI-Assistance in Writing is widespread

18% of financial consumer complaints

24% of corporate press releases

15% of job postings

14% of UN press releases

Arkansas **30%**

Missouri at **26.9%**

North Dakota **24.8%**

California **17.4%**

New York **16.6%**

Connecticut **10%**

This Stanford-led group examined writing samples from January 2022 to September 2024:

687,241 consumer complaints submitted to the US Consumer Financial Protection

Bureau 537,413 corporate press releases

304.3 million job postings, and

15,919 United Nations press releases.

Liang, W., Zhang, Y. et al (2025, Feb 17). The Widespread Adoption of Large Language Model-Assisted Writing Across Society, arXiv: 2502.09747 <https://arxiv.org/abs/2502.09747>

AI is Changing CUSTOMIZATION

You can now create unique and custom songs with Suno, Udio and Riffusion.

What about walk on music for you or your course?

<https://www.youtube.com/watch?v=I5XmXV-RX8>

What about a custom bedtime story for your children?

You can do this using the voice feature in many models (including ChatGPT) but try Hume AI

If you want a custom story read in your own voice, try Cartesia

Try customizing an assignment sheet or problem set for every individual student in your class

AI is the new C Grade

AI Literacy

Could AI Literacy CONFLICT with other Learning outcomes?

How U.S. institutions are delivering AI literacy
Distribution of 61 documented U.S. programs (author's database, June 2026)

1. So far, the most common US institutional response is an optional non-credit, self-paced online module of 3-4 hours (often with the potential for a badge or digital certificate.) Some (like Michigan) have even outsourced this to vendors, like the Microsoft/LinkedIn

Career Essentials in Generative AI certificate. This is fast but also outside of normal faculty curricular development and review.

2. The few required AI Literacy additions (Ohio State, SUNY, Creighton) are inserted into existing courses: required experiences, not new required courses.

3. Required programs are almost all outside of the USA (especially in Korea, Japan and China) and some predate 2022. Japan had a national AI Strategy in 2019 and the University of Johannesburg created its own eight-unit MOOC in 2019 (made into a mandatory series for all students in late 2022)

4. Ethics, verification skills and prompting techniques are the most common topics in the US non-credit optional modules. Data literacy, which Japan's national model curriculum places first, is nearly absent from American badge programs. Safe, productive individual use seems to dominate over critical, civic, or economic understanding. I wonder if this is just how the topics are listed? Labor impact and the environment don't show up either (although I assume the environment is covered in ethical and responsible use???)

Add your school to the list

<https://docs.google.com/spreadsheets/d/1EY690jB-14HKHuOmSL8JVSnFKd0euUrVX3XGy8Ts7P0/edit?gid=1700867749#gid=1700867749>

If your campus adds presentation skills, digital literacy or understanding material culture to the learning goals, neither of those interfere with the existing goals (written communication and critical thinking etc.) But adding AI Literacy might. (See Chapter 5 in TWAI 2nd Edition.)

The same AI interaction can create empowerment or dependency depending on HOW you think about it

- How is your identity entangled with AI?
 - Companion? Counselor? Co-worker?
- Can you easily revise?
- Is AI blended into your thinking?
- Are you or AI the expert?

Edwards, H., Edwards, D. (2025) How We Think and Live with AI: Early Patterns of Human Adaptation Artificiality Journal.

<https://journal.artificialityinstitute.org/how-we-think-and-live-with-ai-early-patterns-of-human-adaptation/>

AI Detection Key Points

1. Faculty cannot detect AI use

- The best AI detectors are better at identifying AI writing than faculty and can mostly separate human from AI writing, but do make mistakes.
- GPT-4 writing is judged to be MORE human by both humans and GPT-4 detectors
- Blind study finds 94% of AI submissions were undetected

Scarfe P, Watcham K, Clarke A, Roesch E (2024) A real-world test of artificial intelligence infiltration of a university examinations system: A "Turing Test" case study. PLoS ONE 19(6): e0305354.

<https://doi.org/10.1371/journal.pone.0305354>

Rathi, Ishika & Taylor, Sydney & Bergen, Benjamin & Jones, Cameron. (2024). GPT-4 is judged more human than humans in displaced and inverted Turing tests. <https://arxiv.org/abs/2407.08853>

2. The accuracy of AI detectors varies considerably

The most recent evaluation of 13 detectors (which requires using pre-2022 essays as a human baseline) found systematic failures across academic tasks and disciplines.

Sun, Y., Liao, Y., Ma, X (2026) Trusting AI to detect AI? A systematic evaluation of the reliability and robustness of current AIGC detection tools for student academic work, Computers & Education (vol 249) ISSN 0360-1315,

<https://doi.org/10.1016/j.compedu.2026.105616>

3. Student strategies can decrease the accuracy of detectors, including paid bypass systems and punish rule-followers.

Hybrid adversarial edits enable 88% of AI-generated content to evade detection

Sun, Y., Liao, Y., Ma, X (2026) Trusting AI to detect AI? A systematic evaluation of the reliability and robustness of current AIGC detection tools for student academic work, Computers & Education (vol 249) ISSN 0360-1315,

<https://doi.org/10.1016/j.compedu.2026.105616>

Weber-Wulff, D., Anohina-Naumeca, A., Bjelobaba, S., Foltýnek, T., Guerrero-Dib, J., Popoola, O., Šigut, P., & Waddington, L. (2023). *Testing of detection tools for AI-generated text*. arXivLabs.

<https://doi.org/10.48550/arXiv.2306.15666>

Perkins, M., Roe, J., Postma, D., McGaughan, J., & Hickerson, D. (2023). Detection of GPT-4 generated text in higher education: Combining academic judgement and software to identify generative AI tool misuse. *Journal of Academic Ethics*. <https://doi.org/10.1007/s10805-023-09492-6>

Derek Newton, The Cheat Sheet <https://thecheatsheet.substack.com/>

Perkins, M., Roe, J., Vu, B.H. et al. Simple techniques to bypass GenAI text detectors: implications for inclusive education. *Int J Educ Technol High Educ* 21, 53 (2024). <https://doi.org/10.1186/s41239-024-00487-w>

4. Detectors do NOT tell you how much AI was used or how it was used.

- “Detectors frequently flag even minimally polished text as AI-generated, struggle to differentiate between degrees of AI involvement, and exhibit biases against older and smaller models.”
- “[M]inimal polishing with GPT-4o can lead to detection rates ranging from 10% to 75%, depending on the detector.”
- Is it cheating if a student writes a text and gets AI refinements? How many refinements?
- What about a human written text that used AI-ideas?

Is even a 1% or 5% false positive rate acceptable?

Saha, S. & Feizi, S. (2025, May 5). Almost AI, Almost Human: The Challenge of Detecting AI-Polished Writing. arXiv: 2502.1566v2. <https://arxiv.org/pdf/2502.15666>

5. As writing becomes more hybrid (Human+AI) Turnitin gets WORSE

The most recent work (June 2026) finds that “the lower the percentage of actual LLM-generated words in a script, the more inaccurately higher the Turnitin’s AI score is. The higher the percentage of actual LLM-generated words, the more inaccurately lower Turnitin’s AI score is.”

Atamhenwan, L.E. How are combinations of human-written words and LLM-generated words by ChatGPT, Copilot, Gemini and Grammarly detected by Turnitin?. *Educ Inf Technol*(2026). <https://doi.org/10.1007/s10639-026-14049-2>

6. Detectors do NOT give you proof.

At best, detectors provide a probability score. That will not hold up in court.

Those scores demonstrate extreme vulnerability: a hybrid editing strategy can enable up to 88% of AI-generated content to evade detection successfully

7. STEM disciplines are subject to significant algorithmic bias.

Sun, Y., Liao, Y., Ma, X (2026) Trusting AI to detect AI? A systematic evaluation of the reliability and robustness of current AIGC detection tools for student academic work, *Computers & Education* (vol 249) ISSN 0360-1315, <https://doi.org/10.1016/j.compedu.2026.105616>

8. AI detectors do not accuse students of cheating.

You do, so legally, you have better be ready with proof.

9. It is not plagiarism.

Plagiarism requires an author from which you copy. Every time you prompt an AI you get a different and unique answer, so you cannot demonstrate an original that was plagiarized.

The US Copyright Office has ruled

“...the outputs of generative AI can be protected by copyright only where a human author has determined sufficient expressive elements.”

You can read the full Report (from Jan 29, 2025) on Copyright and Artificial Intelligence here:

<https://www.copyright.gov/ai/>

10. Turnitin found that the vast majority of student papers had little or no AI.

Few students are still just copy and pasting. This makes finding #5 above more problematic.

Turnitin say 6 Million papers (3% of 200M) had 80% or more AI from April 2023-2024

https://www.prnewswire.com/in/news-releases/turnitin-marks-one-year-anniversary-of-its-ai-writing-detector-with-millions-of-papers-reviewed-globally-302111764.html?utm_source=substack&utm_medium=email

Here is a practice AI detection flagging exercise from Sam Illingworth

<https://samillingworth.itch.io/flagged>

This is an arms race you won't win.

Cheating, especially with AI, is now a huge business.

Move the discussion from policing to learning

It's not Plagiarism, so what do we call this?

Cheating?	Intent to gain advantage
Overreliance?	Excessive dependance
	Undermines educational purpose
Misuse?	Inappropriate use
	Failure to disclose
Fraud?	Deliberate misrepresentation

JOB-LOSS

What we call cheating, business calls progress.

1 in 3 Fortune 500 companies use Grammarly

Why would anyone hire a C student if AI can do C work?

Can we articulate what our graduates will do that AI cannot?

Entry-level JOBS for college grads are harder to find

“...early-career workers (ages 22-25) in the most AI-exposed occupations have experienced a **13%** relative decline in employment even after controlling for firm-level shocks. In contrast, employment for workers in less exposed fields and more experienced workers in the same occupations has remained stable or continued to grow. We also find that adjustments occur primarily through employment rather than compensation. Furthermore, employment declines are concentrated in occupations where AI is more likely to automate, rather than augment, human labor.”

Raise Standards: What More Can Humans Do?

Create an imaginative music video to the song Welcome to the Machine by Pink Floyd

Pink Floyd AI Music VIDEO: <https://www.youtube.com/watch?v=9Gnu9u2Owms>

AI POLICIES

Why Policy?

1. More students will use AI if they have motive, means, and opportunity.
2. AI detection is hardly foolproof.
3. Even a small number of false positives can be harmful.
4. Students don't think about the goals of college the way faculty do.
5. Integrity extends beyond academia but needs to be explicit.
6. Students don't know high quality, unless you teach them this independently.

Students are twice as likely (47% of students vs. 22% of faculty) to say using AI has a positive impact on learning, but will they learn more or just become dependent?

Shaw, C., Yuan, L., Brennan, D., Martin, S., Janson, N., Fox, K., & Bryant, G. (2023, October 23). Tyton Partners. tytonpartners.com/time-for-class-2023/GenAI-Update

Darvishi, A., Khosravi, H., Sadiq, S., Gašević, D., & Siemens, G. (2024). Impact of AI assistance on student agency. *Computers & Education*, 210, 104967. <https://doi.org/10.1016/j.compedu.2023.104967>

The MLA Task Force on Writing and AI has suggested a tiered approach with guided principles at each level: a very broad tier for institution (that connects to other academic integrity policies) with additional guidance at the program or the department and final level for the syllabus. The middle level is the hardest and requires the most conversation!

<https://aiandwriting.hcommons.org/working-paper-2/>

AI Policy TEMPLATE (syllabus level?)

1. When is AI use permitted or forbidden? Why? Is brainstorming with AI cheating? How might AI enhance or inhibit learning in this class?
2. If AI is allowed, must students share their AI prompts with you as part of assignment submission?
3. How should AI use be credited?
4. A warning about the limits of AI.
5. Transparency regarding your planned usage of AI detection tools and how that information will be used.
6. Clear statement about students' ultimate accountability for work.

Sample 1

- One of the course goals is to help you learn to write and communicate effectively: that will require practice.
- While you will be expected to use AI at work to increase the speed at which you can produce, you still need to be able to create, edit and recognize high quality writing yourself. If AI can do the work without you, you will not have employable skills.
- To that end, the assistance of AI is prohibited in the first half of the course. In the second half of the course you may be allowed to use AI under specific circumstances as we transition to learning to write with AI.
- You will still be responsible for the final product and for any limitations or potential biases from LLMs. I reserve the right to modify this policy as necessary.

Sample Campus Policy

- Faculty cannot eliminate the use of AI for brainstorming or feedback of human work.
- Faculty can, however, limit or specify the prompts which can be used for either task, or indeed for any AI support.

List of Universities with Policies

<https://campusaexchange.com/ai-policies-guidelines-map>

AI is Changing CREATIVITY

“It’s like collaborating with an alien.” Ryan McClelland, NASA research engineer

“In order to have good ideas, you need a lot of ideas.” Linus Pauling

QUANTITY of ideas

is the greatest predictor of innovative success

QUALITY of AI ideas

Simulations, Games & Case Studies

- You are an expert in topic A helping students to deepen their understanding and detailed knowledge of subtopic B. Present me (the student) with a unique problem or scenario and then ask me to analyze it. Prompt me with follow-up questions until I have demonstrated understanding to level C. Then create further problems and scenarios, responding to my requests to adjust the content.
- Present me an interactive scenario where I need to make decisions using theory X about material Y. Begin by presenting me with three options for patient care/marketing strategy/follow-up experiment/cultural explanation/thought experiment. Then ask me to clarify the strategies/risks/analysis/consequences of each. Gently interrogate me to strengthen my analysis. Finally ask me to select which I prefer and defend my choice.
- Create a detailed case study in the format used by the Harvard Business School about A to be used by students B majoring in C in course D. This should be a fictional produce/produce based on a real case or event. Describe the history, major players, conflicts and provide students with a series of problems to solve. The case should be 5 pages long and in 3 stages with additional information revealed after each decision. Make sure it has enough details to read like a published case study. End the case with E.

Custom Bots

It is easy enough to send student a prompt for one of the assignments or role playing simulations above, but custom bots give you much more control and security. With a custom bot, you send students a link to a tool which you have set up for them. This also allows you to see everything they do (which you can't with a GPT or other fine-tuned custom bot on a regular platform). You should warn students that their chats will be available to you.

Here is a taxonomy of the things you might do with a custom bot:

AI for ASSESSMENT & ACCREDITATION

MEASURE WHAT MATTERS

Even if it is hard or poorly measured.

Making Course Evaluations Meaningful

How much did this course increase your ability to...

- solve complex problems?
- work in groups?
- increase your own intelligence?
- tolerate ambiguity?
- think in new ways?
- work on problems with more than one answer

INSPIRE what you DESIRE

- Describe how you applied learning from this class into a new context this semester?
- Discuss the quality of feedback in this course?

First studies find AI grading is already often

MORE Consistent, Helpful, Accurate and makes Fewer Errors

- Henkel, O., Hills, L et al (2024, July 15). Can Large Language Models Make the Grade? An Empirical Study Evaluating LLMs Ability To Mark Short Answer Questions in K-12 Education. L@S '24: Proceedings of the Eleventh ACM Conference on Learning @ Scale <https://dl.acm.org/doi/pdf/10.1145/3657604.3664693>
- Dai, Wei & Lin, Jionghao & Jin, Flora & Li, Tongguang & Tsai, Yi-Shan & Gasevic, Dragan & Chen, Guanliang. (2023). Can Large Language Models Provide Feedback to Students? A Case Study on ChatGPT. [10.35542/osf.io/hcgzj](https://doi.org/10.35542/osf.io/hcgzj)
- Gobrecht, A., Tuma, F., Möller, M., Zöller, T., Zakhvatkin, M., Wuttig, A., Sommerfeldt, H., & Schütt, S. (2024). Beyond human subjectivity and error: a novel AI grading system. *ArXiv*, [abs/2405.04323](https://arxiv.org/abs/2405.04323)

Program Assessment

- Evaluate these essays using rubric Y and assess what % of essays meet the X standard.
- Write my departmental accreditation report using this format, and these guidelines and data.
- Suggest assessment measures and performance tasks that align with these learning objectives for an undergraduate degree at X.
- Create an alternative assessment for this learning outcome.
- Analyze this student feedback, social media, reporting or email with faculty and identify the top ten key concerns.
- Categorize the issues into groups and provide 20 strategies for improving each area.
- Suggest 20 scholars who would be appropriate assessors for our university accreditation considering...
- Using this data, create an analysis/recommendation/strategy...

Improving Reports

Analyze the CVs of our visitation team, accreditation guidelines, and examples of successful reports.

- Identify common elements, ideas, methods, structures, or language that might have contributed to success. Recommend how I might adapt our current report to be more successful.
- What might the committee find objectionable, confusing or lacking in this report materials?
- Suggest ten ways to make this assessment report more compelling.

Find Examples

Find me # relevant examples, stories or videos (from the news/TikTok/YouTube/campus social media or campus website) that demonstrate how university X has implemented strategy/goal Y and give me a summary for each that includes its content, reliability and source.

Prepare and Practice

Pretend you are an experienced X accreditor on a visit to campus Y. Read this report and the guidelines for campus visits. Interview me as if you were [name of assessor].

You are a relentless and experienced accreditation assessor from X and you are here to help me prepare for accreditation at the university of Y. Using the attached guidelines and report, prompt me with specific feedback that will challenge me. Include feedback with inaccurate information and require me to correct you will real data. You may also use feedback that looks like a compliment but really is not.

MICRO STRATEGY

A CLEAR AI Strategy – *Controls, Learning, Experimentation, Adoption, Review*

1. Controls

Build trust with safe tools and data, governance, purpose and guardrails.

2. Learning

Train for experimentation, curiosity, limits and ethics.

3. Examples

Share ideas and department-specific work-flow trials.

4. Adoption

Support a culture of feedback, failure, and change.

5. Review

Test for benefits and harm with explicit mechanisms for reporting and iteration.

The Competence Penalty

Acknowledging AI help

Reduces the RATING of the work

- Especially for women (13% vs 6%)
- More from non-adopters (26%)
- Leading to lower adoption
- And shadow AI adoption

Acar, O. Gai, P. J, Tu, Y. & Hou, J (2025, Aug 1) The Hidden Penalty of Using AI at Work, Harvard Business Review
<https://hbr.org/2025/08/research-the-hidden-penalty-of-using-ai-at-work>

Almog, D. (2025, Nov 7) Barriers to AI Adoption: Image Concerns at Work
<https://drive.google.com/file/d/1a2AzcwAbFq-DbwL8qZzPdXNjpF4DaJ1e/view>

Focus on INDIVIDUALS & TASKS

- Broad experimentation
- Start where you are an expert
- Reduce fear
- Incentivize sharing

Micro Strategy 1: AI TASKS & WORKFLOW

Curriculum Analysis & Design

- Analyze our program's required courses and identify any gaps or redundancies in addressing these stated learning outcomes.
- What innovative new courses, goals or degrees might enhance our portfolio? OR help us connect better with local and community needs?
- Compare our current curriculum with these five peer institutions and highlight distinctive elements or potential areas for enhancement.
- Based on these industry advisory board comments and alumni surveys, what skills should we emphasize more strongly in our curriculum?
- What new support should we add for student success based upon data X?

Course Enhancement

- Generate ideas for incorporating more authentic assessment opportunities in this foundational course while maintaining reasonable grading workloads.
- Suggest ways this course could better address diverse learning preferences while maintaining rigorous academic standards.
- Based on this syllabus and these course evaluations, recommend specific changes that might improve student engagement while preserving core content.

Assessment and Quality Improvement

- Review our program's assessment plan and suggest more efficient ways to gather meaningful data about student learning outcomes.
- Based on these student performance data, what patterns might indicate areas where additional support or curricular adjustments are needed?
- Generate a template for department faculty to use when documenting how assessment results led to specific course improvements.
- How should we reallocate budgets to achieve our goals?

Data-Driven Decisions

- "Analyze our department's enrollment data for the past 5 years and identify emerging patterns or trends."
- "Compare our program's student retention rates across different demographic groups and suggest potential factors that might explain any disparities."
- "Based on this curriculum data, what are the most significant gaps between our current course offerings and projected industry needs in our field?"
- Suggest 10 new programs that might attract students X that leverage our strengths in Y
- How might students react to this new website/sports team/major?

Planning

- Analyze these three competing undergraduate programs in our field and identify distinctive elements.
- Generate three possible scenarios for how our department might evolve over the next five years.
- Based on these industry reports and academic publications, what are the emerging trends in our discipline that should inform our next strategic plan?
- What if we tried X?** How might this play out in 5 years?

90% accuracy

in predicting purchase interest

- Off-the-shelf LLM
- No fine-tuning
- Respond as a customer type X
- Only product image

Potential Students?!?

Maier, B. F., Aslak, U., Fiaschi, L., et al (2025, Oct 9) LLMs Reproduce Human Purchase Intent via Semantic Similarity Elicitation of Likert Ratings. [arXiv:2510.08338](https://arxiv.org/abs/2510.08338)

What If? & Simulations

I am trying to gain a richer understanding of problem X. You will help respond as a trusting and honest potential student/customer/a Y person/expert in Z/average A to help deepen my knowledge. Question my assumptions when necessary and tell me stories to build my empathy for the real causes of this problem.

Communication

- Draft an announcement email to faculty about our upcoming program review, emphasizing the importance of their participation and clarifying the timeline.
- Review this draft policy document for clarity, consistency with our university's tone, and potential areas of confusion.
- Create a template for providing constructive feedback to faculty on their annual review materials that is supportive yet clear about expectations.

Automation

- Design a workflow diagram showing how we could streamline our student petition process using automated forms and approval routing.
- Suggest ways we could use automation to reduce the administrative burden of our department's assessment reporting process.
- Create a decision tree for handling common student requests that could be used to develop an automated response system.

Budget Management

- Analyze our department's spending patterns over the last three fiscal years and identify potential areas for reallocation.
- Based on these budget constraints, help me prioritize funding requests from faculty using objective criteria aligned with our strategic goals.
- Create a projection model for our program costs over the next five years, accounting for these variables in enrollment, staffing, and infrastructure needs.
- How should we reallocate budgets to achieve our goals?

Focus on WORKFLOW not tools

Preparing for Board Finance Committee

Micro-Strategies 1 TASKS & WORKFLOW

Efficiency & Automation: Scheduling, Budget Forecasting, Predictive Analytics

Teaching & Curriculum: Course Design, Tutoring, Tracking and Assessment

Communication: Updates, Social Media Monitoring, Engagement Analytics

Compliance: Rule Monitoring, Policy Review, Fraud Detection, Data Integrity

Decision-Making & Planning:

Sentiment Analysis, Prediction, Transfer of Credits

Resource Allocation, Trend Forecasting, Risk Management

Where could you improve decision making or workflow?

Micro Strategy 2: Supporting PEOPLE, CULTURE & SYSTEMS

Innovation & Team Development

- Suggest potential teaching pairs that might create innovative interdisciplinary courses and suggest course ideas based upon their shared interests.
- Analyze these faculty research profiles and identify potential collaborative clusters around emerging themes in our discipline.
- Generate strategies for encouraging meaningful participation from all department members in our upcoming curriculum redesign workshop.

Project Management

- Create a project timeline with key milestones for our upcoming accreditation self-study, including task dependencies and resource requirements.
- Based on these faculty workload data, suggest an equitable distribution of tasks for our department's assessment committee.
- Help me identify potential bottlenecks in this proposed curriculum revision process and suggest mitigation strategies.

Culture

- Generate a list of discussion questions for our faculty retreat focused on embracing pedagogical innovation while maintaining our core educational values.
- Design a framework for a department innovation grant that would encourage faculty to experiment with AI tools in their teaching.
- Based on these faculty surveys, what barriers to innovation exist in our department culture and what strategies might address them?

AI & Equity: BIAS AUDITS

BIAS - What salary should I request?

This data mirrors the reality

Sorokovikova, A., Chizhov, P., Eremenko, I., & Yamshchikov, I. P. (2025). Surface Fairness, Deep Bias: A Comparative Study of Bias in Language Models. <https://arxiv.org/pdf/2506.10491>

AI bias is easier to fix
IF you can find it and prompt to fix it!

Ethical Decision-Making

- What potential biases should I be aware of when using this data set to make decisions about faculty teaching assignments?
- Help me create a transparent framework for communicating to faculty how AI tools informed our resource allocation decisions.
- Generate a checklist of ethical considerations to review before implementing this AI-supported student success prediction model.

Getting Started

- Create a self-assessment tool our department could use to evaluate our current AI readiness and identify priority areas for development.
- Generate a sequenced list of small, achievable steps for integrating AI tools into my role as department chair over the next semester.
- Based on these faculty profiles, suggest personalized approaches for introducing AI tools to colleagues with varying levels of technological comfort.

Building Capacity

- Design a semester-long professional development series on AI tools for academic leaders with varying levels of technical expertise.
- Generate discussion prompts for a department conversation about creating ethical guidelines for AI use in our administrative and academic work.
- Based on these institutional policies, draft a department-level framework for appropriate AI use in faculty, staff, and leadership roles.

EXAMPLES of New AI Work-Flow

Pattern recognition

- MIT patterns in buying computers (to save \$35M)
- How much space do we really need?

Manage data at inhuman scale

- Caltech inventory, fixture, GPS and repair history of every room
- Where could I put this new lab?

Predicting the future & Testing ideas

- U Maine market and enrollment projections for new degrees

Hyper-Personalization of Support, Software & Systems

Agent-Assisted Workflow as new organizational units

Human Roles Will Change

- New novel skills? New jobs?
- New processes ?
- New talent management systems?
- New leadership skills?
- Understanding risks!

Micro-Strategies 2

PEOPLE & CULTURE

Student-Support: Predictive Analytics, Virtual Support, Early Warning, Career

Equity: Bias Audits, Detection & Mitigation, Inclusive Curriculum

Innovation & Collaboration: Team & Project Support, Building Capacity

Professional Development: Mentors, Feedback, Training and Simulations

Where could you prioritize these micro-strategies?

- Offload repetitive tasks to AI
- Augment complex and human tasks with AI
- Check human bias with AI
- Support human development & skills
- Shift performance metrics to essential outcomes
- Prioritize human emotions & thinking
- Encourage transparent use of AI
- Experiment & Share new tools, work-flows and ideas

MACRO STRATEGY

AI is changing work

Previous tech changed how we work.

AI changes capability.

YOUR OLD APPROACH
(deliberate, centralized and lead by IT or consultants)
WON'T WORK for AI

Leaders need Architectural Thinking: how do we rebuild and not just automate?

Strategy is NOT

Operational Effectiveness

Best Practices

Assumptions about Growth

Outworking the Competition

Strategy is...

Strategy is

- ...is a cohesive response to challenge
- ...applies strength to weakness
- ...is about how
- ...connects vision to action
- ...is the art of sacrifice
- ...is choosing to perform activities differently than rivals do to establish a maintainable advantage (Michael Porter)

Diagnosis vs Action

Strategy requires both

WHERE does human quality matter most?

WHICH TASKS do humans no longer need to do?

- What can be automated?
- What needs to be reviewed or edited?
- Where does human quality matter most?
- What training do people need?

WHAT NEW service/support is now possible?

- What previously impossible thing could you now do?
- What could you now personalize?
- What could you now improve?
- What is the MOST exciting thing you could do?

Bots for Assessment?

- Grade student chats using this rubric and example...
 - (Mizzou and Boodle)
- Create an assessment on topic X and ask students a series of questions until they have demonstrated mastery to level Y.
- Begin by asking students what they hope to do when they graduate and what interests they have. Then customize this assessment to individual interests. Require students to reach this level of mastery and then report a grade in the LMS gradebook.
- Ask students to submit their code/story/lab report/business plan and respond by pointing out the security breaches/inconsistencies/loopholes/unforeseen problems. Ask students to improve answers and resubmit. Continue the process until the student has reached the first level in the attached rubric.

CONNECT YOUR KNOWLEDGE

- AI is only as smart as what it can find.
 - This is more important than which model.
- If AI can find it, AI can know what everyone knows.
 - Make your messaging platform crawlable.
 - Claude as team-member in Slack
 - Record and transcribe every meeting.
 - Route everything to a shared knowledge layer.

What new STRATEGY could you pursue??

- Is there a new market you could now serve (one where the profit or margins did not exist previously?)
- What would lower costs now allow you to do?
- What could you now personalize?
- What could you now improve?

What is the MOST exciting thing you could do?

The end of courses?

But NOT of teachers.

AI Traffic Signals

If AI interventions fail, human coaches provide support.

Sid
Sid is a support consultant, trained to help students, visitors understand the programs offered by SVHS and answer questions from educators and parents as well as students.

Sage
Sage is a personal tutor helping students through all the courses in the SVHS Learning. Sage is available to students 24/7 within each course, and has expert knowledge of the course materials.

Barni
Trained with unique capabilities to self-act, creating, Barni practices assessment from such as essays, assignments and tests. Barni looks over the PC when the test starts, tracks the students eye movements and other student behavior.

Frankie
Frankie is an academic coach, helping students to select courses, navigate through the high school process and prepare for college.

Dot
Dot is a teaching assistant, interacting with teachers as well as students. Dot chats with students to test their comprehension of the materials, and helps teachers with curriculum development and grading.

Ace
As an integral part of the SVHS Smart Editor where students write essays and other written assignments, Ace is a writing and assessment guide, encouraging students and helping them to improve their writing.

What new STRATEGY could you pursue?

- Is there a new market you could now serve (one where the profit or margins did not exist previously)?
- What would lower costs now allow you to do?
- What could you now personalize?
- What could you now improve?
- What is the MOST exciting thing you could do?

This Stanford study found that most important characteristics of successful implementation were

- **JURISDICTIONAL CLARITY**
- Who is in charge?
- **TASK CENTRALITY**
- Is it a task that people agree is important?
- **HOMOGENEITY**
- Is the task the same for different groups?

Vendraminelli, V, Narayanan, D. & Karunakaran, A. (2024, Sep) Eliciting Domain Expertise in the Absence of Formal Authority: The Case of AI Developers and Domain Experts in a Large Firm. Stanford HAI Working Paper
https://digitaleconomy.stanford.edu/wp-content/uploads/2024/09/AI_Developers_Domain_Experts_Formal_Authority.pdf

The Training Paradox

- AI is changing average.
- Everyone will need to be an expert at something.
- How do you gain experience without practice?

AI in Higher Ed

Efficiency: Scheduling, Budget Forecasting, Recruitment, Development

Teaching & Learning: Course Design, Tutoring, Tracking and Assessment

Student-Support: Predictive Analytics, Virtual Support, Early Warning, Career

Decision-Making: Sentiment analysis, prediction

Equity: Bias Audits, Detection & Mitigation, Inclusive Curriculum

Strategy: Resource Allocation, Trend Forecasting, Risk Management

Compliance: Rule Monitoring, Policy Review, Fraud Detection, Data Integrity

Communication: Updates, Social Media Monitoring, Engagement Analytics

Table 1 Taxonomy of AI in Educational Leadership.

From: [Artificial intelligence in educational leadership: a comprehensive taxonomy and future directions](#)

Domain	Key components	Examples
1. AI for Administrative Efficiency	- Automated scheduling systems - Data-driven decision support - HR management - Student enrollment and retention analytics	- AI-optimized class schedules and room assignments - Budget forecasting tools - Automated recruitment and performance evaluation systems - Predictive models for student dropout risk
2. AI for Personalized Learning	- Adaptive learning platforms - Intelligent tutoring systems - Learning analytics	- Content difficulty adjustment based on student performance - AI-powered virtual tutors - Student behavior and performance tracking tools
3. AI for Enhancing Teaching Practices	- AI in curriculum design - Teacher professional development - Intelligent classroom management	- Data-driven curriculum refinement tools - AI-recommended professional development opportunities - Real-time feedback on classroom dynamics
4. AI in Decision-Making and Policy Formulation	- Predictive analytics for policy development - Sentiment analysis for stakeholder feedback - Ethical and equity decision support	- AI-powered policy outcome forecasting - Large-scale feedback analysis tools - Bias detection in decision-making processes
5. AI for Enhancing Student Support Services	- AI-based career counseling - Mental health and behavioral analytics - Virtual assistants for student support	- Personalized career and college guidance systems - Early warning systems for mental health issues - 24/7 AI chatbots for student queries
6. AI in Organizational Leadership and Strategic Planning	- Strategic resource allocation - Trend forecasting in education - Risk management and crisis response	- AI-driven budget optimization tools - Predictive models for future skills demand - AI-powered risk assessment and contingency planning
7. AI for Governance and Compliance	- Regulatory compliance monitoring - Fraud detection and data integrity	- Automated educational standards compliance checks - AI systems for detecting anomalies in institutional data
8. AI for Community Engagement and Communication	- AI-powered communication tools - Feedback and engagement analytics - Social media monitoring	- Automated messaging systems for parent communication - AI analysis of community feedback - AI-driven social media sentiment analysis
9. Ethical AI Leadership and Governance	- Bias mitigation strategies - Privacy and data security management - Transparent AI use policies	- AI bias detection and correction tools - Robust data protection frameworks - Clear guidelines for AI use in educational settings
10. AI for Diversity, Equity, and Inclusion (DEI) Initiatives	- AI-driven equity audits - Inclusive curriculum design - Supporting special education needs	- Data analytics for identifying educational outcome disparities - AI tools for developing culturally inclusive content - Personalized education plans for students with special needs

Sposato, M. Artificial intelligence in educational leadership: a comprehensive taxonomy and future directions. *Int J Educ Technol High Educ* **22**, 20 (2025).

<https://doi.org/10.1186/s41239-025-00517-1>

AI Strategy is not just IT strategy!

- Understand the risks
- Senior leaders understand AI risks and rewards
- Professional development
- New jobs to support new AI implementation
- Reallocation of Budgets
- Testing and validation for each new AI process
- Process to decide when human in the loop is required
- Curriculum! Literacy, Ethics, Sr Seminar
-

PREPARE for the AI Future

- **ANTICIPATE** what might be possible in the future
- **COLLECT** more Data
- **CUSTOMIZE** AI with YOUR DATA
- **INTEGRATE** Data into Decision Systems
